Productos de acero inoxidable

Stainless steel products

El acero inoxidable es un tipo de acero resistente a la corrosión, dado que el cromo que contiene posee gran afinidad por el oxígeno y reacciona con él formando una capa pasiva de aproximadamente un átomo de grosor, evitando así la corrosión del hierro. Sin embargo, esta capa puede ser afectada por algunos ácidos, dando lugar a que el hierro sea atacado y oxidado por mecanismos intergranulares o picaduras generalizadas.

Stainless steel is a type of steel resistant to corrosion, since the chromium it contains has a great affinity for oxygen and reacts with it to form a passive layer approximately one atom thick, thus preventing the corrosion of iron. However, this layer can be affected by some acids, leading to the iron being attacked and oxidized by intergranular mechanisms or generalized pitting.

El acero inoxidable que nosotros normalmente usamos para nuestros productos es el tipo AISI 304, AISI 316 y AISI 316L con un acabado satinado o brillante. Este tipo de acabado garantiza una actuación excelente por lo que se refiere a la durabilidad, fuerza, además de su fácil limpieza.

The stainless steel that we normally use for our products is AISI 304, AISI 316 and AISI 316L with a satin or bright finish. This type of finish guarantees excellent performance in terms of durability, strength, as well as easy cleaning.

Sobre el acero inoxidable pueden aparecer pequeñas manchas como resultado del contacto con la atmósfera marina, ambientes húmedos, así como la cal proveniente de los riegos. Este tipo de contaminación sobre el acero inoxidable se eliminará con la aplicación de productos limpiadores que contengan ácido fosfórico.

Small stains may appear on stainless steel as a result of contact with the marine atmosphere, humid environments, as well as lime from irrigation. This type of contamination on stainless steel will be eliminated with the application of cleaning products that contain phosphoric acid.

Productos en aluminio

Aluminium products

El aluminio es un elemento químico, de símbolo Al y número atómico 13. Se trata de un metal no ferroso. Es el tercer elemento más común encontrado en la corteza terrestre. Los compuestos de aluminio forman el 8% de la corteza de la tierra y se encuentran presentes en la mayoría de las rocas, de la vegetación y de los animales. En estado natural se encuentra en muchos silicatos (feldespatos, plagioclasas y micas). Como metal se extrae del mineral conocido con el nombre de bauxita, por transformación primero en alúmina mediante el proceso Bayer y a continuación en aluminio mediante electrólisis. Nuestros artículos han sido protegidos con cromatización y acabados con pinturas de poliéster y su deterioro puede producirse por: **1.** Contacto continuado con aguas de alto porcentaje de sal o aguas ácidas contaminadas por abonos o insecticidas. / **2.** La electrólisis producida por el contacto del aluminio con los tornillos de sujeción si son de acero (se aconsejan de acero inoxidable). / **3.** La corriente vagante existente en el terreno, únicamente evitable con una correcta toma-tierra. / **4.** La no protección rápida del aluminio en el caso de verse arrancada la pintura por roce o golpe.

Aluminum is a chemical element, with the symbol Al and atomic number 13. It is a non-ferrous metal. It is the third most common element found in the earth's cortex. Aluminum compounds make up 8% of the earth's cortex and they are present in most rocks, vegetation, and animals. In its natural state it is found in many silicates (feldspars, plagioclase and micas). As a metal, it is extracted from the mineral known as bauxite, by transformation first into alumina through the Bayer process and then into aluminum through electrolysis. Our articles have been protected with chromatinization and finished with polyester paints and their deterioration can be caused by: **1.** Continuous contact with waters with a high percentage of salt or acid waters contaminated by fertilizers or insecticides. / **2.** The electrolysis produced by the contact of the aluminum with the fixing screws if they are made of steel (stainless steel is recommended). / **3.** The existing wandering current in the land, avoidable only with a correct grounding. / **4.** The non-rapid protection of the aluminum in the event of the paint being torn off by rubbing or hitting.

Productos poliamida

Produits en polyamide

Una poliamida es un tipo de polímero que contiene enlaces de tipo amida. Las poliamidas se pueden encontrar en la naturaleza, como la lana o la seda, y también ser sintéticas, como el nylon o el Kevlar. La poliamida, de uso cada vez más frecuente en la industria, agrupa materiales como el Policarbonato, Polivinilo o el Nylon. Todos ellos con unas características comunes: su difícil destrucción y su larga duración. Considerado uno de los materiales más adecuado en productos expuestos a temperaturas extremas, a la humedad, al salitre del mar, a los rayos UV y a los fertilizantes químicos. La composición de los materiales poliamida, son garantía de una larga duración, tanto en zonas secas como húmedas. Su deterioro puede producirse por: **1.** Maltrato o fuerte impacto. / **2.** Aproximación a espacios de alta temperatura. / **3.** Contacto con productos químicos de mucha acidez.

A polyamide is a type of polymer that contains amide-type linkages. Polyamides can be found in nature, like wool or silk, and can also be synthetic, like nylon or Kevlar. Polyamide, increasingly used in industry, groups materials such as Polycarbonate, Polyvinyl or Nylon. All of them with some common characteristics: its difficult destruction and its long duration. Considered one of the most suitable materials in products exposed to extreme temperatures, humidity, sea salt, UV rays and chemical fertilizers. The composition of the polyamide materials is a guarantee of a long life, both in dry and humid areas. Its deterioration can be caused by: **1.** Mistreatment or strong impact. / **2.** Approach to high temperature spaces. / **3.** Contact with highly acidic chemicals.

CONSEJOS USO E INSTALACIÓN

USAGE AND INSTALLATION TIPS

Empotrables de suelo y balizas

Floor recessed and bollards

En instalaciones de luminarias empotradas, deberán ser realizadas por personal cualificado, teniendo la máxima precaución y de acuerdo con las instrucciones de montaje adjuntadas con el producto y conforme a las normas de instalación electrónica de la normativa vigente. Para tener en cuenta en este tipo de instalaciones: **1.** Evite colocar las luminarias en vaguadas o depresiones del terreno. **/ 2.** Es indispensable realizar un drenaje para todos los aparatos (arena de gravilla de 25 a 30 mm) con el objetivo de evitar el estancamiento de agua en el fondo del surco donde se instalan los aparatos. Un drenaje correcto debe permitir la absorción de 5 litros de agua en 8 minutos. **/ 3.** En lo referente a los aparatos encastrados en cemento u hormigón y habida cuenta de la tendencia de estos materiales a sufrir dilatación o compresión debido a los cambios de temperatura, es preciso prever un recubrimiento de dilatación y asegurarse de que el surco esté nivelado con el pavimento. **/ 4.** La conexión entre los aparatos debe efectuarse mediante cable flexible tipo H05RN-F o H07RN-F con el fin de facilitar su mantenimiento y evitar los esfuerzos sobre los pasacables durante la instalación. Se tiene que evitar la instalación de varios cables por una sola salida o la instalación con cables unipolares. Al igual que se recomienda la utilización de conectores estancos en instalaciones soterradas con el fin de evitar posibles daños por humedad.

Para conservar balizas/postes, instálelos sobre una pilastra elevada, nunca a nivel del suelo, tierra o césped. Los cambios de presión por condiciones ambientales y altitud pueden ser causados por el calor al encender y enfriar la luminaria o por golpes térmicos de lluvia, nieve o lavado.

Para reducir la condensación en aparatos con alto IP, opere la luminaria 1 hora sin el cristal de protección y luego ciérrala de inmediato. Las decisiones técnicas deben ser tomadas por el responsable del departamento técnico, limitando sugerencias externas.

For recessed lighting installations, they must be carried out by qualified personnel, with the utmost caution and in accordance with the assembly instructions provided with the product and in compliance with the current electrical installation regulations. Points to consider for such installations: **1.** Avoid placing the lights in dips or depressions in the ground. **/ 2.** It is essential to ensure effective drainage for all fixtures (gravel sand of 25 to 30 mm) to prevent water from pooling at the bottom of the trench where the fixtures are installed. Proper drainage should absorb 5 liters of water in 8 minutes. **/ 3.** For fixtures embedded in concrete or cement, considering the tendency of these materials to expand or contract due to temperature changes, a dilation covering must be provided, and the trench must be level with the pavement. **/ 4.** The connection between fixtures should be made using flexible cable type H05RN-F or H07RN-F to facilitate maintenance and avoid stress on cable glands during installation. Avoid installing multiple cables through a single outlet or using single-core cables. It is also recommended to use waterproof connectors in buried installations to prevent potential damage from moisture.

To preserve bollards/poles, install them on an elevated pedestal, never at ground level, on soil or grass. Pressure changes due to environmental conditions and altitude can be caused by heat from turning the light on and off or by thermal shocks from rain, snow, or washing.

To reduce condensation in high IP-rated fixtures, operate the light for 1 hour without the protective glass, then close it immediately. Technical decisions should be made by the technical department head, limiting external suggestions.

En el cambio de las lámparas y antes de cerrar las luminarias se debe limpiar las juntas para evitar que se depositen restos de tierra y/o hierba. — When changing the lamps, the joints should be cleaned prior to closing the luminaire to avoid the accumulation of earth and/or grass.

No instalar más de un cable por cada salida. Instalar sobre una pilastra a un nivel superior. — Do not install more than one cable in each outlet. Install on a plinth at a higher level.

CONSEJOS USO E INSTALACIÓN TIRAS LED

1. NO doblar la tira u otros componentes ya que podría dañar el conexionado. (1) / NO tocar ni ejercer presión sobre los LEDS durante la instalación. (2)
2. NO conecte directamente la tira de LED a la red eléctrica. Sólo debe conectarse a un controlador adecuado de 24V.
3. Evitar ubicar las tiras en zonas con temperatura elevada o luz directa del sol. Se recomienda el uso de perfiles de aluminio para reducir la temperatura de trabajo. (Imprescindible para tiras de más de 5W/m).
4. Los productos pueden dañarse por descarga electrostática (ESD). La puesta a tierra evita los efectos dañinos de la ESD. Durante el montaje, use un sistema de puesta a tierra personal para evitar la acumulación de carga estática.
5. Dependiendo de la superficie, utilice un limpiador multiuso (por ejemplo, alcohol isopropílico) para proporcionar una superficie de montaje limpia y seca, libre de aceites, revestimientos antiadherentes y partículas de suciedad.
6. Si el producto necesita ser cortado a medida; por favor mida cuidadosamente y corte en ángulo recto las marcas de corte señaladas usando solamente unas tijeras afiladas.

USAGE AND INSTALLATION TIPS LED STRIPS

1. DO NOT touch or press the LED strips or other components during the installation. (1) / DO NOT twist or bend the LED strip, or connection may be damaged. (2)
2. DO NOT connect the LED strip directly to mains supply. It must only be connected to a suitable 24V LED driver.
3. Avoid placing the strips in areas with high temperature or direct sunlight. We recommend the use of aluminum profile to reduce the temperature. (Required for more than 5W/m strips).
4. Products can be damaged by electrostatic discharge (ESD). Grounding prevents the harmful effects of ESD. During assembly, use a personal grounding system to avoid static charge buildup.
5. Depending on the surface, use a multi-purpose cleaner (e.g. isopropyl alcohol) to provide a clean and dry mounting surface which is free of oils, release coatings and dirt particles.
6. If the product needs to be custom cut; please measure carefully and cut at right angle by the appropriate cut marks by using a sharp scissors.

CONSEJOS USO E INSTALACIÓN TIRAS LED

La máxima distancia posible del convertidor a las tiras vendrá dada por la sección del cable utilizado. No se debe exceder la caída de tensión de 2V en el conductor entre la tira o tiras en el convertidor. La sección (S) en mm² del cable necesario viene determinado por la siguiente fórmula, siendo:

- *r" la resistividad (Cu = 0,017)
- "L" la longitud en metros de la línea
- "I" la intensidad en Amperios
- "V" la caída de tensión máxima admisible

Los convertidores deben contemplar las pérdidas en la distribución, es aconsejable sobredimensionar la potencia de éstos en un 20% para cubrir estas pérdidas.

USAGE AND INSTALLATION TIPS LED STRIPS

The longest distance from the converter to the strips will be given by the section of the cable to be used. The 2V voltage drop in the conductor between the strip(s) and the converter should not be exceeded. The section (S) in mm² of the required cable is determined by the following formula, they are:

- *r" the resistivity (Cu = 0,017)
- "L" Line length in meters
- "I" Intensity in amps
- "V" the maximum allowable voltage drop

The converters must consider the losses in the distribution, it is advisable to oversize their power by 20% to cover these losses.
